

POST-SECONDARY PATHWAYS RESEARCH PROJECT

WHAT YOU'RE GOING TO DO:

After conducting a number of personality and skills tests, you should have a fairly clear picture of what career options are best suited for you. Based on your findings, you will now complete a post-secondary pathways research activity that will help you determine the best direction to choose to help you reach your ultimate career goal following completion of high school.

RESEARCH PROCESS:

1. Complete the Secondary School Requirements and Personal Education Plan (grade 9 and 10 only) handouts in class. These will provide you with a clearer understanding of what credits and requirements you must satisfy in order to graduate high school.
2. Based on class discussions and career research completed above, determine which are the most suitable post-secondary options to pursue your career. Choose **TWO** of the following pathways to explore further: **Apprenticeships, College or University.**
3. Using the research handouts provided in class, complete the necessary investigation of your TWO chosen pathways. Make sure to keep accurate notes during this stage.
4. After completing step #3, consult with your teacher to decide which post-secondary option is best for you (including selection of specific institution/program). Your instructor will provide a final research handout to help you gather the required program information.

After conducting the necessary research, you will prepare a detailed slideshow (Prezi, Powerpoint or Keynote) that you will present to the class.

Visit class website for additional information:
